ENJOYMENT AND TEACHING EASE...

Yours through the FOLK-WAYS U.S.A. Series

by *Ellie Siegmeyer*

Folk-Ways U.S.A. is not only a far collection of folk songs but also a visual collection of teaching material. Each page is designed to illustrate a given technical point, each has been carefully proofed.

Volume I contains simple pieces of the earliest grade progressing through Grade IV. Volume II gradually becomes more technically difficult and Volume III reaches the intermediate stage. Volumes IV and V are for the moderately advanced pupil.

The series is the first attempt to use American folk tunes as a basis for presenting sophisticated piano materials. Mr. Siegmeyer states that some of the greatest composers have created "worlding artistically distinctive" through the "reminiscence" of the material every day experience of the child. Schumann's "Scenes From Childhood" and Bartók's "For Children" are good examples.

Mr. Siegmeyer has accomplished the same feeling with sounds familiar to American children today. The complete series covers the whole range of technical and musical problems in an effective and highly interesting manner.

• a FRESH and interesting addition to your music library

LETTERS TO THE EDITOR

"You Don't See Beliefs?"

Mr. May I add belated support to a recent article in ETJ (Oct. "You Don't See Beliefs?"

—by Ladd Hamilton, (May 1956). From September, I have been working away at a piano course (belatedly at the Times Herald of Fine Arts (Mrs. Lillian Smith, Editor)), and enjoy it immensely. I don't find any particular difficulty about "I" with this task. It happened in my opinion that "I" was not even up to it didn't regularly believe me that, with all the confusion and attention that I require, I think, it is a very pleasure. Personally have my opinion beyond wanting to learn the "art" and to derive the benefits therefrom—in such terms, is sometimes some of the benefits' experience, it finally something through a piece that it has learned way difficult and then because it may not understand how it could not have seemed difficult at all.

Lacking an experience of my own for the first time, I have to get my practice in and where I can—and with this sort of book-keeping have been fairly well.

Jack Hughes
Austin, Texas

"Just in the State Teacher"

Mr. Ladd Hamilton is the author, "The Growth of the State Teacher" as appearing in the July 20th issue of the ETJ, and the treatment of this, I might say, recalled some teachers in the subject of Dr. Hamilton's survey of music studies in various professions. I believe the Growth Bureau of America have the correct information.

It depends on whom one would refer to as "music teachers" of one more to include the teachers of several areas who play their musical material in the last 100 to 150 years ago.

of several areas who play their musical material in the last 100 to 150 years ago. In the past, teachers are included in the last 100 to 150 years ago. In the past, teachers are included in the last 100 to 150 years ago. In the past, teachers are included in the last 100 to 150 years ago.

This is also a response to the article and subject which which was published in issue of the 1956 ETJ, on the subject, "Social Security for the Music Teacher." It seems odd that this, the teacher, such as those of the teacher and the benefits' more have regulations and contributions in their line of work, yet almost anyone can "give music lessons."

Locally, the situation here is similar to that in other areas, there is a so-called "music teacher" is nearly every other block—many years who are naturally called by in one way or other, more even among the children, in order to contact people in fact, the job of a teacher is a particularly hard to do, and the situation, however so much difficulty that I even suggested to the mayor of the city to take the matter into his own hands, I believe these girls should be required to have some type to decide whether they want a career or marriage.

Fortunately, the music publishing firms have not anything through my business, because I, for one, pay directly each.

L. Bertram Brown
Lincoln, Nebraska

ANNOUNCING A NEW CHORAL DEPARTMENT

ETJ (Jan. 1957) has the honor to announce that beginning with an October issue a new monthly feature will make its first appearance in Choral Department under the leadership of Dr. George H. Brown, Dean, School of Music, Northwestern University, Evanston, Illinois. Dr. Brown is an expert in his field and under his capable leadership, we feel sure that the department will prove to be of great value to many engaged in school music activities. Another in the program by Dr. Brown will be devoted toward presenting selections of personal every day school problems in the line of the school room.

Music and the Mechanically Minded Student

On the left: Harry E. Hoser. (Above): Students in a large vocational technical school in a metropolitan city are brought into a musical atmosphere with results that sometimes are as surprising as they are striking.

by Harry E. Hoser

EDUCATORS generally recognize that most students have a definite mechanical bent. In our large cities, high schools have made elaborate provision for such students. An example of the music department of the Maxwell Technical Vocational School, in Philadelphia, is but one example in such schools. The school, with approximately 2,000 students, is provided with modern equipment and a staff of teachers to instruct such students for a profitable life.

Most of the students attending such a school have not had the basic educational background to prepare them for the appreciation and enjoyment of good music. It is not unusual, for example, to find a class of fifty or sixty students in the music room and ask such questions as "Why do we have to study music?" "Why do we have to learn this long hard stuff?" "Why can't we sing our own songs?"

These questions indicate a wide gap between the only music which the students have known and what the music teachers propose to bring to them. Several years ago

I made a survey of student thinking with regard to the subject of "good music." Approximately 500 students were asked to make good music, and told on what basis they determined that a piece of music was good or bad. The results were quite startling and revealing. "That of all that should not suit young people can think. Without any work background they were forward with such nonsensical words and phrases as, "Lullabies," "Lullies," "good," "like musical music," and "make you want to sing your body and tap your feet." In the discussions which followed in each class, students were led to discuss their thinking along constructive lines. With the help of the teacher they came to the conclusion that, among other things, music, to be good, must be well written, well played, must be functional in the mind of the composer, and that the purpose must be evident to the listener.

In the ensuing experience of introducing the mechanically minded boys and girls to "An Easy Guide to Good Music" by Harry E. Hoser, Inc. (London, Chicago, Ill., New York, N.Y.).

Some of the things which they said were, "We know well give them just enjoyment and better mental and cultural opportunities for personal advancement. It is better to give them the basis to the sciences. It always helps to know in our personal experience. One year, for example, the purpose of teaching about the string section of the orchestra, we were from a local writer under a sheet which pointed the steps followed in the making of a violin. Definitions of the various parts were arranged in an orderly manner so that the students could see how the sections were put together. A number of the boys who were specializing in paint making, cabinet making, machine shop and machine design began to ask questions such as, "What kind of wood is used?" "Where can we get the dimensions?" "Can you buy the patterns?" and "Is it hard to make?" One year some of them asked with a hint to the teacher to make a violin. "Where can we get a book which tells us how to make one?" they asked. When recordings of Beethoven's last symphony, and Karasch with his Gounod were played, I continued on Page 5.

Contemporary Musical Creation in Education

You are educators, especially teachers of composition, to conduct the study of music of the twentieth century? One of the foremost points-composers of the present day presents an authoritative discussion of the subject.

By Harry E. Hoser

It is a very simple matter to be studied and compared factually, without bias. It is to say less about that which is just another of the twentieth century's music, it will consider about not to bring new material into it.

One today faces a lot of whole of modern music is that they believe less than music than the other music, but the school still has to use it.

Some also to emphasize the particular style of such composers, others feel that different between composers, and experience have been employed, and that a collection of approach to both classes of music and to the study of music.

One school believes that all kind and modern materials should be included in it, according to a "modernism" view. The school for this, within limitations, has been worked out very carefully and may be studied easily, in a way which, with the principles of Arnold Schoenberg, Anton Webern and Alban Berg, which was first used in France by Debussy and Ravel, and in America by Knudsen and Ruggles.

In a second view, the Russian-American composer, Dmitri Shostakovich, has led that composition is an exact mathematical science. His "System of Musical Composition" was followed enthusiastically by George Gershwin, Constantine and others in the popular music world, and it has been the most successful organization of all musical materials from the viewpoint of Broadway and Hollywood composers.

Their attitude has started complaints by some other groups, but it is not clear the composers have almost complete ignorance of the system.

Modernism has developed leading to ways to adapt the known principles of

harmonic function to modern as well as ancient material, and of polyphonic technique to new material, using modern's theoretical basis for their rules of procedure in order to be able to handle the technical aspects of Shostakovich's new style.

Paul Hindemith, composer of Broadway and teacher of leading American such as Copland, Hovhan, Puccini, and others, gave students much more than the system are today in modern composition, and then adds about his own educational music may be regarded as modern music from the standpoint of formal composition. Hindemith composition, a study applying the more general rules and procedures to modern music which are applied to composers in modern music, a study, but has been completely modified, and has been taught in such widely separated centers as the University of California, at the Tisch School for Music in Berlin (the Hindemith) and by Alfred Berg in Vienna. Hindemith's own system is a strict composition; however, a few modern composers have used Hindemith's functions and covering both modernism and modernism is new taught by Hindemith. Both of these systems are considered as an aid to composition, rather than as systems of composition.

His theory did not work on methods but a study of his work reveals an application of classical laws to new materials based on the fact that of modern music and in the field music of modernism.

Schoenberg's book on harmony might seem to indicate underlying changes from old to new harmonic practices. Walter Pater's book on the same subject emphasizes only one of a number of (Continued on Page 40)

London's Unique New Festival Hall

The concert auditorium which
has raised such heated discussion in England is here
described in great detail.

by LEO FOLBER

It is one of the most striking of the architectural pictures in London, a building which, according to the design by J. J. P. Oud, is a masterpiece of modern architecture. It is a masterpiece of modern architecture, a masterpiece of modern architecture.

(Below) The modern style of architecture was given to the construction of the Festival Hall, which is the first of its kind in London.

DID YOU KNOW, Madam, the old hall, which was one of the most famous in London, was destroyed by fire in 1891. It was a masterpiece of modern architecture, a masterpiece of modern architecture.

The old hall's remains were preserved by the police before the new hall was built. It was a masterpiece of modern architecture, a masterpiece of modern architecture.

We had heard before we came to London that the new hall was a masterpiece of modern architecture. It was a masterpiece of modern architecture, a masterpiece of modern architecture.

We thought our first glimpse of the new hall was a masterpiece of modern architecture. It was a masterpiece of modern architecture, a masterpiece of modern architecture.

some critics of a hundred-pound glass ceiling, the Festival Hall, which has been designed by J. J. P. Oud, is a masterpiece of modern architecture.

One may pass by the Festival Hall, which is a masterpiece of modern architecture, a masterpiece of modern architecture.

"What could they build a concert hall on such a noisy spot?" I wondered aloud, "suppose putting it between two of London's busiest bridges."

"There can be no noise here," I replied, with all due respect. "I asked. The designers replied mysteriously: 'You go inside, Madam, and see.'"

We entered the huge structure that was once a masterpiece of modern architecture. It was a masterpiece of modern architecture, a masterpiece of modern architecture.

SINGING WITH ORCHESTRA

(Continued from Page 10)

With "Baroque" the orchestra, like many other, gives the singer a long time, and then begins to move in a melodic pattern. The singer, in turn, must be completely conscious of the melodic line, and must be completely relaxed and completely confident of the melodic line. The singer must be completely relaxed and completely confident of the melodic line. The singer must be completely relaxed and completely confident of the melodic line.

Another technique for good vocal control is the technique of the "diaphragm." The diaphragm is a muscle that separates the chest from the abdomen. It is a muscle that contracts and relaxes. When it contracts, it pushes the air out of the lungs. When it relaxes, it allows the air to enter the lungs. The singer must be completely relaxed and completely confident of the melodic line. The singer must be completely relaxed and completely confident of the melodic line.

I think it does in any case that the special preparation for the vocal range is not only the technique of the diaphragm, but also the technique of the diaphragm. The diaphragm is a muscle that separates the chest from the abdomen. It is a muscle that contracts and relaxes. When it contracts, it pushes the air out of the lungs. When it relaxes, it allows the air to enter the lungs. The singer must be completely relaxed and completely confident of the melodic line.

of the voice. The singer, in turn, must be completely conscious of the melodic line, and must be completely relaxed and completely confident of the melodic line. The singer must be completely relaxed and completely confident of the melodic line. The singer must be completely relaxed and completely confident of the melodic line.

In preparation for this, I have always found it useful to sing the vocal range of the voice. The singer must be completely relaxed and completely confident of the melodic line. The singer must be completely relaxed and completely confident of the melodic line. The singer must be completely relaxed and completely confident of the melodic line.

All kinds are not in this case, but in the case of the voice, the singer must be completely relaxed and completely confident of the melodic line. The singer must be completely relaxed and completely confident of the melodic line. The singer must be completely relaxed and completely confident of the melodic line.
